

Jeremy Ahamioje

Full-Stack Developer

I build API-driven, data-heavy web applications end to end — React and TypeScript front-ends, Node and Python services, PostgreSQL underneath — and run them in production. Recent work centres on programmatic search, web scraping and data extraction, including a live platform built on SerpApi. A design background means the interfaces hold up too.

SELECTED PROJECTS

Opportunity Command Center LIVE

Next.js 16 · React 19 · TypeScript · PostgreSQL / Drizzle · SerpApi · Vercel + Supabase

- Opportunity-pipeline CRM — ten-stage pipeline, scoring, follow-up engine, analytics, daily email digest — with every figure counted from stored rows. Same schema on embedded Postgres or hosted Supabase; auth re-checked in every server action.
- Two SerpApi connectors (Google organic, Google Jobs) turn a query into reviewed draft records: one row per registrable domain, directories and job boards filtered out, apply links ranked employer → ATS → aggregator, provenance kept on every row.

Evidence Engine

Python · SQLite · Anthropic API / AWS Bedrock · search APIs

- Reproducible research pipeline: search → fetch → LLM extraction (structured output) → content-based dedup → SQLite corpus. An identical re-run adds zero rows; a duplicate under a changed URL is still caught.
- Respects robots.txt and records every blocked fetch with its reason. Stdlib-only core.

Parking Intelligence Platform

Node · Express · Playwright · PostgreSQL / Supabase · Next.js · GitHub Actions · Ubuntu VPS

- Scrapes inventory and prices across SpotHero, ParkWhiz and Way.com for 50 venues, with change detection, alerts and Ticketmaster event discovery; a REST API behind a Next.js dashboard; scrapers on a US VPS under cron plus GitHub Actions.
- Per-platform anti-bot strategy: a US datacenter IP for a geo-WAF, a static residential proxy for a Cloudflare challenge, stealth Chromium with session reuse. Validated at 176 / 97 / 54 listings for one event.

jeremybuilds.online

React · Vite · GSAP · sharp · Playwright · Vercel

- This portfolio: GSAP scroll sequences, an AVIF/WebP image pipeline, a weighted loading manager, Vercel headers. Verified with Playwright; this PDF is printed from the live component.

EXPERIENCE

2023 — Present

Independent

Full-Stack Developer & Designer

Freelance practice

Design, build and ship full-stack web applications — React and TypeScript front-ends, Node and Python services, PostgreSQL — deployed to Vercel, Render and Linux hosts. The projects above are from this period.

2022 — 2023

Remote

Full-Stack Developer

Built full-stack web applications with React, TypeScript, Node.js and REST APIs, including data-heavy interfaces, integrations and backend services.

2021 — 2022

Remote

Front-End Developer

Built responsive marketing and application front-ends in React, with attention to motion, accessibility and performance budgets.

ADDITIONAL EXPERIENCE

Upwork · 3,000+ hours

Data Research & Operations

Structured web research, data collection, validation, cleaning and deduplication across large datasets, with an emphasis on accuracy, consistency and auditable, reusable workflows.

TECHNICAL SKILLS

LANGUAGES

TypeScript, JavaScript, Python, SQL

FRONT-END

React, Next.js (App Router, Server Actions), Vite, Tailwind, GSAP

BACK-END & DATA

Node.js, Express, REST APIs, PostgreSQL, Drizzle ORM, Supabase, SQLite, schema migrations

EXTRACTION & AUTOMATION

Playwright, web scraping, proxy and anti-bot strategy, SerpApi, LLM-assisted extraction (Anthropic, Gemini, Bedrock), data cleaning and dedup

DEPLOYMENT

Vercel, GitHub Actions, Linux VPS and cron, Docker, Git / GitHub

DESIGN

Figma, interface and interaction design, typography, motion
